Corrosive-Resistant Printer Hits Australian Shores

At last a printer that can withstand high humidity levels, wash down environments and salt air. Dy-Mark Identification Solutions has announced the release of the new M-Class Mark II Corrosive-Resistant Printer from Datamax. Now available in Australia through Dy-Mark Identification Solutions, the corrosive-resistant printer is ideal for the seafood, meat and poultry industries, and other food and beverage processing facilities.

All key printer components have a protective coating, which gives the printer its corrosive resistant properties. These properties make the M-Class Mark II ideal for use on fishing vessels or for use by seafood wholesalers and processors who until now have struggled with rusting printer components.

The M-Class Mark II offers a flexible printing solution. It is a multi-purpose printer ideal for barcode labels and a wide range of other labels include pallet labels, address labels, ingredients labels or for overprinting variable data on full-colour primary product labels. The M-Class Mark II has a level of accuracy that exceeds any other printer on the market.

The Datamax M-Class Mark II is a compact industrial printer with die-cast metal construction, unique IntelliSEAG printhead and a large graphical display. With its coated printhead mount assembly and housing, the corrosive-resistant M-Class Mark II is in a class of its own.

The anti-corrosive option is an addition to the M-Class Mark II which enables it to serve even more industries. The M-Class Mark II continues to provide the same high level of performance, to an additional niche industry. It is now more robust, equipped with additional protection to handle the harshest conditions.

The corrosive-resistant printer option is only available on the Datamax M-4206 Mark II. Dy-Mark Identification Solutions are a Datamax partner in Australia and New Zealand, and an accredited Datamax service centre. Dy-Mark Identification Solutions is an Australian owned company, specialising in the manufacture of high quality labels including plain labels, overprint labels, carton and pallet labels. Dy-Mark also distribute a range of equipment for printing and applying labels to primary products and outer packaging, as well as high speed inkjet coders for batch and date coding.
